

### DigiShot 103

DigiShot 103 attaches directly to the spirit bottle.

All dispense actions are recorded locally and saved to a cloud.

### Reports / Tablet

Reporting is via a Master Control Unit (10" Android Tablet). The DigiShot dispensers communicate actions to the MCU via Mobile Data or Wi-Fi connections. Onsite reporting and configuration of the dispensers are managed from the MCU.

Offsite monitoring is via the internet. A user will view venue reports from the Digitot web based back office. Access is secure and password protected.

The DigiShot 103 can be configured from 1 unit up to 32 units and can accommodate 750ml or 1L bottles.

The optic used on the DigiShot 103 dispenses 25ml in 1.8 seconds making it one of the fastest in its class.

These optics are manufactured from a food grade approved plastics and stainless steel.

**Stock Security**

**Cloud**

Digitot partners with Vodacom in acquiring a custom APN and virtual server. The APN drives the advertising at our customer sites and is accessed from Digitot Head Office.

The virtual server is set up for our clients to access their reports from the cloud facility via the internet.

**Access Control**

The DigiShot 103 has 3 options for access control to suit any requirement.

1. RFID: This option utilises a NFC card or tagging option.

2. Finger Print: The barman will be able to unlock for a dispense by placing his finger on the window of the reader.
3. Dallas Key: This is the most basic of the 3 options. Barman will have to place his key on a reader before his dispense.

**Remote Reporting Option**

Remote reporting provides the facility to download reports pertaining to dispense and current "STOCK ON HAND" figures.

These reports are downloadable at any time via our website.

The reports are available in a printable "Text" mode as well as an exportable "Delimited file (CSV)" format.

With permission, Digitot views the dispense report and inventory stock taking report on the Digitot remote back office and provides an independent unbiased opinion on the actions.

The dispense report information updates approximately every 2 minutes. Inventory items are communicated after every physical stock count.
